## 10 Big Question: How did the universe begin?

### Galaxy Zoo

You will need a computer with Internet access

There other types of galaxies besides spiral and elliptical, such as barred spirals and irregular. The website [www.galaxyzoo.com](http://www.galaxyzoo.com) needs your help to classify them!

All you need to do is view a galaxy, and then select which type you think it might be. Don't worry about getting each one exactly right; the website makes its final decision based on many different people's selections for each individual galaxy.

It's a great way to learn about different galaxy types, and you're helping out the scientific community as well.

This classroom activity was suggested by Thomas Harrison, PhD student in the School of Chemistry and Physics, University of Adelaide.
